Work Experience

FullStack MERN Developer

EventBuizz-Lahore

October 2023 to Present

Working on an EventCenter Application, a product for our company, involving collaboration with senior developers and cross-functional teams to ensure alignment and quality. Leveraging the MERN stack to design, develop, and maintain robust web and mobile applications. Building responsive interfaces with React.js and Next.js to deliver high-quality user experiences. Implementing server-side logic and RESTful APIs using Node.js and Express.js for secure, scalable data handling. Utilizing Redux to manage application state, ensuring efficient data flow and optimized performance across the app

Senior React Js Developer

Enlatics-Lahore

February 2022 to October 2023

Developing responsive, secure, and scalable applications using React Native and React.js on the frontend, with Node.js, Express.js, and MongoDB powering the backend. Committed to writing clean, efficient, and maintainable code in JavaScript and TypeScript, ensuring code quality and reliability. Collaborating closely with UI/UX teams to translate design concepts into seamless, interactive user experiences. Expertly integrating interfaces with HTML, CSS, and modern design principles to enhance usability and visual appeal.

ReactJs Developer

Hashed System-Lahore

March 2021 to February 2022

As a React.js Developer in frontend development, I specialize in building responsive and dynamic web applications using React.js and associated technologies. I am skilled in integrating backend services, managing state with Redux, and implementing UI/UX designs to create seamless user experiences. My expertise also extends to working with modern JavaScript tools and libraries, ensuring efficient, maintainable code that aligns with best practices. I am passionate about continuous learning and improving my development skills, always eager to take on new challenges and contribute to impactful projects."

Education

BS (Hons) in Information Technology

Virtual university - Lahore

August 2018 to November 2022

During my university studies, I developed a solid foundation in several key programming languages and technologies. I gained proficiency in C++ for structured and object-oriented programming, and I learned web development fundamentals through HTML, CSS, and JavaScript, enabling me to create interactive, user-friendly websites. My coursework in Database Management Systems (DBMS) provided me with a strong understanding of data organization, retrieval, and security. Additionally, I studied essential concepts in computer science, including bits and binary logic, which deepened my technical insight. Together, these skills equip me to approach complex problems with a well-rounded, practical toolkit.

Skills

- React Native
- React J.S
- HTML/CSS
- BOOTSTRAP/REACT-BOOTSTRAP
- STYLED-COMPONENTS/SASS/SCSS
- EXPRESS J.S
- GRAPH QL
- NODE J.S
- ANT-DESIGN
- TAILWIND CSS
- JAVASCRIPT(JS)/TYPESCRIPT(TS)
- APOLLO-SERVER
- MONGODB (NOSQL)
- MYSQL(SQL)
- MATERIAL UI
- PRISMA
- REDUX/REDUX-TOOLKIT
- VERSION-CONTROL(GIT)
- NEXT JS
- VUE JS
- AMAZON WEB SERVICES(AWS)
- Native-base
- WordPress

Languages

- English - Intermediate

Publications

Facebook-Clone
November 2023

I am currently working on a personal project, a Facebook Clone, using the MERN stack to enhance my full-stack development skills. This project allows me to explore and implement advanced features such as real-time notifications, user authentication, and dynamic content updates. By building this application, I am refining my proficiency in MongoDB, Express.js, React.js, and Node.js while improving my understanding of frontend and backend integration, state management with Redux, and implementing best practices in web development.

I am working mobile application in react native.

Ninja-training project

I completed a comprehensive Ninja-training project that involved building a polished and user-friendly UI, developing robust APIs, and seamlessly integrating them to ensure a smooth and efficient user experience. Through this project, I focused on creating scalable and secure server-side logic and refined the UI to provide a professional, cohesive design. The project demonstrates my expertise in full-cycle application development, from interface design to backend functionality, with attention to best practices for a highly professional end product.

AML-watcher-

https://amlwatcher.com/

February 2024

I was currently working as a MERN developer on the AML Watcher application, a web solution owned by Enlatics Software Company. In this role, I contribute to the design, development, and maintenance of the application, focusing on leveraging the MERN stack to build a responsive, scalable, and secure platform. I collaborate with cross-functional teams to ensure seamless integration of front-end interfaces with back-end services, ensuring high performance and reliability. This project demonstrates my expertise in full-stack development, API design, and real-time data processing, aimed at providing a robust solution for anti-money laundering monitoring.

Eventcenter Web-app

http://my.eventbuizz.com

I worked as a MERN developer on the Eventcenter project, a company product focused on managing event and program schedules. My responsibilities included developing and maintaining features for event timing, participant check-ins and check-outs, and other event-related functionalities. I ensured smooth integration between the frontend and backend while optimizing the system for performance and scalability. This project gave me valuable experience in handling real-time data, managing user interactions, and implementing secure, efficient workflows for event management.
